SUBJECT	Jamming Station in Bucharest	DATE DISTR.	26 August 1955	25X1
		NO. OF PAGES	3	
DATE OF INFO.		REQUIREMENT		25X1
PLACE ACQUIRED		REFERENCES		25X1
DATE ACQUIRED		This is UNEVALUATED Information		

SOURCE EVALUATIONS ARE DEFINITIVE. APPRAISAL OF CONTENT IS TENTATIVE.

1. The jamming station is believed to be located near the Arch of Triumph in Bucharest. It is bounded on the north by Blvd. Vorosilev; on the west by Sos. Kisselef; on the south by Strada Munteanu; on the east by Strada Maier Sontu. There is an area of roughly 250 by 100 meters. The whole area, with the exception of the part bordering on Strada Maier Sontu, is surrounded by a seven foot wooden fence. Houses border the area on Str. Sontu, none of which, however, appear to be connected with the jamming station. A large number of telephone wires run into one house on this street and it is probably some kind of communications center. There is a complexity of radio masts, antennae and wires in the area itself, and because of the fence and trees, it is difficult to obtain an accurate description.
2. The following points have been observed: There is about a 60 foot radio mast slightly west of center in the area. This has support wires running down to the ground and does not seem to be connected with any other masts. To the west of it, there are two smaller masts about 25 meters apart running in a general east-west direction. These support a hoop-type antenna, from the center of which is suspended another hoop-type antenna which runs down to the ground. Slightly north of this there is a similar type of array mounted on smaller masts, about 35 feet high, also running east-west, but with two hoop-type antennae running down to the ground. An antenna or transmission line runs from the most westerly of these two masts to another mast about 25 meters south; two hoop-type antennae are likewise suspended from this line and run down to the ground. Thus, this smaller array appears to consist of three masts in the form of a right angle triangle, with one side of the triangle running roughly east-west and the other, north-south. The buildings connected with the jamming station appear to lie on the extreme west of the area bordering Sos. Kisselef and they are well screened by trees. There is another small array with two masts running north and south just east of a building; two small hoop-type antennae suspended from wires between these masts run into one building.
